

## **Dave Armstrong**

I am the new Aquatic Invasives Species Supervisor for the Alabama Division of Wildlife & Freshwater Fisheries (ADWFF), starting in November 2020. So, as a newbie to the Tennessee River valley, am still sorting out the aspects of what we need to do and get this program up and running. Our primary program focus is invasive carp, though, we do try to address all invasive species issues. My prior 26+ years' experience with the ADWFF was as both a biologist and Supervisor for District V (greater Mobile area) working on fresh and estuarine fisheries management issues and research projects. Early experience included work for federal agencies in the Pacific Northwest, Auburn University and as a biological contractor for Tennessee Valley Authority
